

## fdf-Converter v6.0.2 - Business::Other Software

fdf-Converter: convert FDF-files to other data formats very easily

fdf-Converter converts any FDF file to a data format, other applications or databases like Excel or Access are able to process. You simply have to select a FDF file or directory with FDF files and fdf-Converter will convert all of them to a \*.CSV file. You want all data imported to a certain spreadsheet? No problem. With some few clicks you select an unlimited number of FDF files graphically and organize data import for example to one single Excel-file.

For you can call up fdf-Converter from other applications or via parameter passing you are able to process FDF files to different data formats in series - automatically !.

What is a FDF file? FDF-files contain content of PDF form fields. That means there are two different kinds of file formats a PDF form creates: 1st the pure PDF file where texts, structure and pictures of a form are located in. 2nd the FDF file where form field content - that means content a user edits to a form - are saved in. Up to now it is very awkward to convert a FDF file to other data formats like Microsoft Access or an Excel file. fdf-Converter is a very easy solution to create these formats.

+++ convert FDF to Access or Excel +++ program call up within other applications or via parameter passing +++ process unlimited numbers of FDF files in one step +++ create one single file from all FDFs +++
